

BUILDING THE INNOVATION BRIDGE

Healthcare
Technology

Thursday, Oct. 25, 2018 7:30 am - 12:30 pm
7596 Colshire Drive, McLean VA

2018 Washington Technology Showcase

Each year, the ability to monitor individual health improves. Connected heartrate monitors, scales and blood pressure cuffs, information from sources such as 23andMe, and interoperability across electronic medical records systems are enabling a new era of selfsensing and information sharing.

However, even when there are clear advantages to using intelligent automation and information sharing technology, we must be wise to their use. AI systems are often a black box, where improper training can lead to unusual or catastrophic conclusions. Improper use of medical records can lead to accuracy, security, legal, privacy, cost and interoperability issues. And cybersecurity issues with sensitive yet connected systems present serious concern.

This is at the heart of the 2018 Washington Technology Showcase. Through point-counterpoint discussions, panels and keynote addresses, we will explore:

- **Personalized/Individualized Health**
- **Interoperability and Patient Data Access**
- **Cybersecurity and Artificial Intelligence**

Relevant early-stage companies will have the opportunity to introduce themselves to the audience, followed by a networking session.

2018 Washington Technology Showcase

Thursday, October 25, 2018 7:30 am – 12:30 pm

The MITRE Corporation, McLean, VA
